The Problem with Traditional Practice

WHY CLINICS MUST UPGRADE

Most dental practices in Bangladesh operate on paper files, WhatsApp messages, or generic hospital software that wasn't built for dentistry. This results in daily friction, diagnostic blindspots, and lost revenue.

✗ Problem 1: Handwritten Prescription Drag

Dentists spend 6 to 10 minutes per patient hand-writing repetitive drug doses. Handwriting is frequently misinterpreted by pharmacists, patient drug allergies are forgotten, and past visit notes are misplaced.

✗ Problem 2: Overlapping & Double Bookings

Front-desk assistants juggle phone calls, paper diaries, and walk-ins. Two patients end up booked for the same chair at 6:00 PM, causing angry waiting room arguments and dentist burnout.

✗ Problem 3: Lost Radiographs & Clinical History

Periapical X-rays and OPG films get buried in paper folders or forgotten on personal mobile phones. When a patient returns months later, the doctor has no immediate visual record of the root canal progress.

✗ Problem 4: Financial Leakage & Mixed bKash Cash

Split payments (partial cash, partial bKash/Nagad) lead to daily accounting headaches. Without an automated ledger, discounts, unpaid balances, and procedure fees slip through the cracks unnoticed.

The ORIS EMR Transformation

ORIS EMR was engineered from day one around the clinical reality of a fast-paced dental chamber:

⚡ 4x Faster Patient Turnaround

With 1-click Bangla dosages (ঔষধ) and visual 2-digit FDI tooth charting, consultations finish in record time without compromising care.

🛡️ Absolute Schedule Certainty

Split operational shifts (e.g. 10 AM–2 PM & 5 PM–9 PM) and automated buffer spacing guarantee zero double bookings.

📄 Unyielding Financial Clarity

Every procedure performed by the doctor instantly populates the billing invoice. Zero fractional paisa errors and instant receipt printing.

2.5 hrs

Doctor documentation time saved every single working day

0%

Double-booking rate with PostgreSQL GIST scheduling locks

+35%

Increase in on-time patient appointments and chair efficiency

100%

Audit-proof billing and multi-channel bKash/Cash reconciliation

Every button, dropdown, and interaction in ORIS EMR has been tuned for speed and precision.

1. Interactive 2-Digit FDI Tooth Chart

Full support for Adult (32 teeth: 11-48) and Pediatric (20 deciduous teeth: 51-85). One-click assignment of 15+ clinical dental conditions: Caries, Pulpitis, Missing, Crown, Root Stump, Impacted, and Fracture. Generates visual dental status directly on the official printed prescription.

2. Sub-60s Bangla Prescriptions

No typing required. Select medicines with intelligent auto-complete and apply 1-click Bangla instructions: **১+০+১ (ভরা পেটে), ০+১+০ (খাবারের আগে)**, with duration (**৫ দিন, ৭ দিন**). Patients understand their medications clearly, drastically improving treatment compliance.

3. Doctor-Only Private Clinical Notes

Dentists need to record confidential clinical observations (e.g. prognosis doubts, suspected pulp exposures, patient compliance history). ORIS EMR separates confidential doctor notes so they **NEVER print on the patient prescription**.

4. Barcode Smart Cards (CR80 Standard)

Elevate your chamber brand by issuing personalized plastic identity cards. Front-desk staff scan the 1D barcode with any inexpensive USB handheld scanner to open the patient's entire medical record in 0.2 seconds.

5. Smart Anti-Collision Slot Engine

Configurable operational shifts (e.g., 10:00 AM–2:00 PM and 5:00 PM–9:00 PM). Automatically prunes expired time slots, enforces procedure durations (e.g., 30m Biopsy), respects chair buffer intervals, and blocks double-booking.

6. Live Queue & TV Waiting Lounge Display

Transform clinic waiting rooms. Hook up any smart TV or tablet to display live token callouts (Token #A-104 • Chair 1). Eliminates shouting in the reception area, calms anxious patients, and gives your clinic a modern hospital aesthetic.

Active Clinical Allergy Safety Guardrail

If a doctor selects Amoxicillin or Augmentin for a patient with a recorded Penicillin allergy, ORIS EMR triggers an instant high-visibility alert with mandatory clinical override reasons and audit logging. Protects your clinic from catastrophic medical liability.

Dental procedures are high-ticket and multi-step. ORIS EMR ensures every root canal, crown, implant, and scaling is accurately tracked, invoiced, and collected.

 Whole-BDT Financial Ledger

Generic software often imports Western decimal logic that creates rounding errors. ORIS EMR operates on a strict whole-Bangladeshi-Taka (BDT) ledger. Zero fractional paisa errors, clean rounding, and exact cash balances.

 Multi-Channel Split Settlement

Patients frequently split bills: e.g., ₳3,000 via bKash and ₳2,000 in cash. Front-desk staff record exact payment methods with bKash/Nagad Transaction IDs (TrxID) for seamless end-of-day bank reconciliation.

 Professional Printed Receipts & Pad

Instant 1-click printing on A4, A5, or pre-printed clinic letterheads. Automatically embeds your clinic logo, doctor BMDC registration numbers, barcodes, itemized procedural costs, and paid/due balances.

 Branded Public Booking Portal

Every clinic receives a dedicated online booking page: `orisemr.com/book/{clinic-slug}`. Patients view real-time open slots, book from their smartphones, and receive automated appointment confirmation emails.

How ORIS EMR Compares to Alternatives

FEATURE / CAPABILITY	PAPER FILES & PADS	GENERIC HOSPITAL EMR	ORIS EMR DENTAL CLOUD
Dental 2-Digit FDI Tooth Chart	✗ None	✗ Generic body chart	✓ Adult & Pediatric FDI
Native Bangla Dosage (ঔষধ)	✗ Hand-written	✗ English text only	✓ 1-Click Bangla Presets
Split Shift Scheduling (10-2 & 5-9)	✗ Manual memory	✗ Single block only	✓ Automated Anti-Collision
Hardware Barcode Smart Cards	✗ Paper slips	✗ Costly hardware setup	✓ 0.2s Plug-and-Play CR80
Doctor Private Clinical Notes	✗ Visible to patient	✗ No print separation	✓ Strictly Hidden on Print
bKash / Cash Split Settlement	✗ Manual cash book	✗ Complex USD/EUR math	✓ Native Whole-BDT + TrxID
Waiting Lounge TV Display Mode	✗ Calling patient names	✗ Expensive add-on	✓ Built-in Web TV Mode

Zero-Friction Adoption

IMPLEMENTATION ROADMAP

Transitioning your chamber to ORIS EMR requires zero downtime, zero local servers, and takes less than 48 hours.

1 Day 1: Instant Chamber Activation & Brand Setup

We configure your clinic profile, upload your official logo, set dental chair counts, define doctor schedules (split shifts), and import your standard procedure price catalog.

2 Day 2: 30-Minute Front-Desk & Staff Training

Your reception team learns how to scan patient smart cards, manage the live queue, schedule appointments, and process bKash/Cash payments. Dentists review the 60-second prescription builder.

3 Day 3: Live Chamber Launch with On-Demand Support

Start welcoming patients with custom branded smart cards, live TV lounge displays, and instant printed prescriptions. Our onboarding team provides real-time support throughout your first clinic week.

Enterprise Security & Data Isolation

Multi-Tenant Isolation

Every clinic's patient records, billing ledgers, and clinical notes are cryptographically and logically isolated. No clinic can ever access another practice's data.

AWS Encrypted Storage

Patient X-rays, intraoral photos, and clinic logos are securely uploaded to AWS S3 with CloudFront CDN acceleration for blazing fast image load times.

99.9% Cloud Availability

Access your chamber records anytime from clinic desktops, laptops at home, or your smartphone. Automatic nightly backups ensure zero data loss.

Ready to Modernize Your Dental Practice?

Book an exclusive 1-on-1 live software walkthrough with our dental practice solutions team. See firsthand how ORIS EMR can save hours of daily documentation and elevate your clinic's patient experience.
